

$$\sigma = -2$$

$$\omega = \pm 2$$

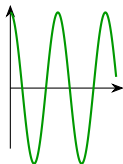

$$\sigma = -1$$

$$\omega = \pm 2$$

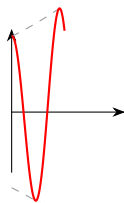

$$\sigma = 0$$

$$\omega = \pm 2$$

$$\sigma = 0.5$$

$$\omega = \pm 2$$

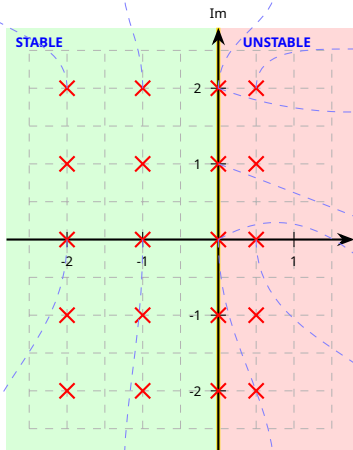

FUNDAMENTALNO SVOJSTVO:

Realni deo (σ): **stabilnost & vremenska konstanta**

Imaginarni deo (ω): **učestanost oscilovanja**

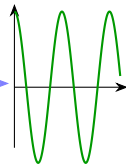

$$e^{st} = e^{\sigma t} (\cos \omega t + j \sin \omega t)$$

Zato što se polovi konjugovano-kompleksni,
imaginarni delovi se međusobno ponište,
te je ukupni odziv uvek realan.

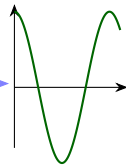

$$\sigma = 0$$

$$\omega = \pm 2$$

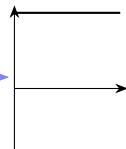

$$\sigma = 0$$

$$\omega = \pm 1$$

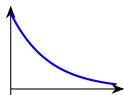

$$\sigma = 0$$

$$\omega = 0$$

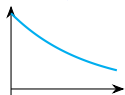

$$\sigma = -2$$

$$\omega = 0$$

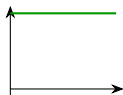

$$\sigma = -1$$

$$\omega = 0$$

$$\sigma = 0$$

$$\omega = 0$$

$$\sigma = 0.5$$

$$\omega = 0$$
